

Mentor Technical Group Provides Support to FDA-Regulated Industries

BY PEDRO VALLE JAVIER

Mentor Technical Group provides technical support in utilities management for industries regulated by the Food & Drug Administration. It balances three major aspects: people, regulatory compliance, and technology. The company's mission is to support manufacturing, engineering, technical services, and quality compliance by providing managerial, technological, and regulatory compliance solutions for processes, equipment, and utilities, to help them serve customers' needs.

Mentor has the experience and specialized technical personnel in utilities systems, such as heating, ventilation and air conditioning (HVAC), compressed air, U.S. Pharmacopeia Convention grade water, steam, clean steam, electric power distribution, potable water, and building envelope. The company offers utilities management and operations outsourcing, computerized maintenance management solutions (CMMS), instruments calibration, project management, and regulatory compliance.

In the utilities management and operations outsourcing area, Mentor can provide customers with maintenance engineering skills. This allows clients to focus on their essential business goals and objectives and lets the engineers and staff currently employed by the client concentrate on strategic objectives while Mentor runs their day-to-day maintenance operations. In CMMS, Mentor assesses facilities to determine the approach required.

Mentor also offers different calibration services such as weights and laboratory calibrations; studies of temperature, humidity, and dew point; and management of calibration standards, which are on call at all times. As a project manager, Mentor oversees the planning, scheduling,

budgeting, execution, start-up, validation, and operational procedures required for a successful project. The company can also provide its customers with the regulatory and validation

knowledge necessary to function effectively. Through its Mechanical Division, Mentor can also repair all styles and types of mechanical seals regardless of manufacturer or complexity. ■

PRMA's Historical Legacy

Continued from previous page

in Puerto Rico, the PRMA was there to fulfill its mission. It has done so responsibly throughout all stages of the island's manufacturing evolution. It has upheld its faith in the ability of the Puerto Rican labor force to skillfully adapt to the demands and requirements of the dominant industrial sectors. It was there when the needle industry flourished and stimulated the growth of the female work force. It was there when petrochemicals and their satellite industries boosted economic development in the south. It was present when the early microprocessor circuits were successfully assembled here. It was there to witness the unsurpassed ability of Puerto Ricans to meet and exceed world production standards in pharmaceutical assembly lines. ■

INRUMEC CPI
HIGH PURITY FLUID TRANSFER DIVISION
SINCE 1963 A LEADING INDUSTRIAL DISTRIBUTOR

of Fluid Transfer and Material Handling Products. We represent the leading manufacturers and provide our customers accurate technical assistance, superior quality products, excellent service, and a competitive price.

Now Serving all Your High Purity Needs:

- Sanitary Tubing and Fittings
- Diaphragm Valves
- Ball Valves
- Butterfly Valves
- Valve Automation
- Sanitary Gauges
- Sanitary Steam Traps
- Orbital Welding Equipment
- Lined Pipe and Fittings
- SS Pipe and Fittings

- Expansion Joints
- Sight Flow Indicators
- Teflon Hoses
- Medical Grade Silicone
- Sampling Systems
- Instrumentation Tubing
- Instrumentation Fittings
- Safety Relief Valves
- Gaskets
- Sheet Material
